

MADAD

Rape, is a series of actions against the consent of the person, and they are one of the damaging actions that only have a conviction for 2 in every 100 cases that occur.

Madad, is the act of aiding those in need and finding a footing from their issues.

With our product, we had to make sure that we never sought to sell another group of products that undermined and did not look at the situations on a broader page.

Our President's Challenge idea revolves around the basis of these three times:

1. **PRE:** How to aid the person in detecting signs and avoiding them alongside assistance from representatives in determining the indicators.
2. **ITM:** Narrow down what the victim is experiencing in seconds and initiate the person's safety.
3. **POST:** If a victim experienced a non-consensual incident, we sought to assist with any trauma the victim experienced. Additionally, legal and authority assistance skim, find, and detain those responsible for the incident with conviction.

We can solve the problem with the following set of products:

- **Ring:**
 - This acts as the physical detector based on BP, Heartrate, Consent Audibility, O2 levels, Thermal Sensors, Touch Sensitive Surface, and any other forms of sensing that would bring forth immediate assistance.
- **App:**
 - Verifies and confirms the triggers/signals from the ring and proceeds to make contact with the respective Police Department, Family/Friends, and nearby helpers(if opted in)
 - Holds the backup mic for Consent Audibility
 - Prepares a group of social, legal, and justice serving officers to assist, skim, find and detain those responsible for the incident with conviction.
